SRINADH CHINTHAM
Aurora, CO • (408) 893-2750 • srinadhc5100@gmail.com • LinkedIn

PROFESSIONAL SUMMARY

- Senior Java Full Stack Developer with **10+ years** of experience designing, building, and deploying enterprise applications across the full SDLC in Agile/Scrum teams, spanning state government, telecom, and aerospace domains.
- Expert in **Java (8, 11, 17, 21), Spring Boot, Spring Framework (MVC, Security, Cloud, Batch, Data JPA), and hibernate**, with a strong record of delivering scalable RESTful and SOAP-based microservices.
- Hands-on experience building event-driven systems with **Apache Kafka** (Producer, Consumer, and Streams APIs), Apache Camel, ActiveMQ, and JMS, including cluster, broker, and topic configuration.
- Strong cloud background on **AWS** (Lambda, ECS, EKS, EC2, API Gateway, Step Functions, DynamoDB, S3, Route 53, Secrets Manager, CloudWatch), with infrastructure as code using **Terraform** and CloudFormation.
- Containerized and deployed microservices using **Docker and Kubernetes and** designed secure API Gateway integrations with containerized ECS/EKS back ends.
- Full stack UI development with **Angular (2 through 6+), AngularJS, React, TypeScript**, JavaScript, HTML5, CSS3, Bootstrap, and RxJS, delivering responsive, role-based user interfaces.
- Skilled in data migration and ETL using **Oracle and MSSQL Server**, writing and tuning complex SQL, stored procedures, and views using explain plans, hints, and indexing strategies.
- Built CI/CD pipelines with **Azure DevOps, Jenkins, and GitLab**. Experienced with Maven, Gradle, JUnit, Mockito, TDD, Splunk, Log4j, and Logback for build, quality, and observability.
- Experienced in AI-assisted development with GitHub Copilot and AI-driven code review, using them to speed up delivery, cut boilerplate, refactor legacy code, and surface defects earlier.
- Developed internal AI agents for developer productivity and production support, automating code reviews, test scaffolding, and SQL tuning, and turning logs and CloudWatch alerts into root-cause summaries and remediation steps.

Core Competencies: Java Full Stack Development, Microservices Architecture, Event-Driven Architecture, RESTful API Design, Cloud-Native Development, Serverless (AWS Lambda), Containerization, Infrastructure as Code, CI/CD, Data Migration & ETL, Performance Tuning, Test-Driven Development, Agile/Scrum.

EDUCATION

- Bachelor of Technology in Computer Science & Engineering, Jawaharlal Nehru Technological University, Hyderabad, India 2014.
- Master of Science in Computer Science, University of Central Missouri, Missouri, USA 2016.

TECHNICAL SKILLS

Programming Languages: Java (8, 11, 17, 21), Kotlin, TypeScript, JavaScript, Python, SQL, PL/SQL.

Frameworks & Libraries: Spring Boot, Spring Framework (MVC, Security, Cloud, Cloud Function, Batch, AOP, Data JPA, JDBC), Hibernate, JPA, Apache Camel, Apache CXF, Jersey, Struts.

Frontend: Angular (2-6+), AngularJS, React, Node.js, TypeScript, JavaScript, HTML5, CSS3, jQuery, AJAX, RxJS, Bootstrap, DataTables, JSON, XML.

Cloud & Infrastructure: AWS (EC2, ECS, EKS, Lambda, Step Functions, API Gateway, S3, DynamoDB, Route 53, Secrets Manager, CloudWatch), Terraform, CloudFormation, Docker, Docker Compose, Kubernetes, Tomcat, WebLogic, JBoss.

Messaging & Streaming: Apache Kafka (Producer/Consumer/Streams API), ActiveMQ, JMS.

Databases: Oracle (9i, 12c), Microsoft SQL Server (MSSQL), MySQL, MongoDB, DynamoDB.

Web Services: RESTful APIs, SOAP (JAX-WS), Spring-WS, WSDL, Swagger/OpenAPI, APIGEE, NGINX, OAuth 2.0, JWT.

CI/CD & DevOps: Jenkins, Azure DevOps, Gradle, Maven, Git, GitHub, GitLab, SVN, JIRA.

Testing: JUnit, Mockito, EasyMock, MUnit, Jest, SoapUI, TDD.

Monitoring & Logging: Log4j, Logback, Splunk, AWS CloudWatch.

IDEs: IntelliJ IDEA, VS Code, Eclipse.

Methodologies: Agile/Scrum, SDLC, Microservices Architecture, MVC, SOA, OOP, Design Patterns.
AI Tools: GitHub Copilot, AI-assisted code review and debugging.

PROFESSIONAL EXPERIENCE

OIT – State of Colorado (CDLE), Denver, CO Sep 2021 – Present
Senior Software Developer

- Designed and built a configuration-driven data migration solution using **Spring Boot and Apache Camel** to move data from CATS source tables into the MyUI+ schema, feeding Deloitte's MyUI+ unemployment insurance platform.
- Developed Spring Boot 2.7.x microservices leveraging Dependency Injection, Spring Security, and Spring JDBC, exposing both RESTful and SOAP-based web services for internal and partner integrations.
- Built and upgraded Spring Boot microservices on **Java 17 and Java 21**, adopting modern language features to simplify code and keep services on current, long-term-support Java releases
- Built Spring Boot microservices for high-volume message processing on a **Kafka** cluster; managed broker and topic configuration and implemented Producer, Consumer, and Streams API processing.
- Developed Java-based **AWS Lambda** APIs to manage and automate AWS resources including EKS, EC2, S3, Route 53, and API Gateway, as part of a largely serverless application architecture.
- Built a client framework to securely consume web services hosted on **AWS ECS**, and containerized Spring Boot services with Docker for deployment to ECS and EKS.
- Delivered an Angular front end hosted on AWS, backed by API Gateway, Lambda, Node.js, and Secrets Manager services running on EKS. Built reusable TypeScript components and role-based pages and routes.
- Fixed defects and delivered new features in React and Node.js applications following MVC architecture, standardizing all timestamps to GMT using date-format and moment.
- Helped build an end-to-end archive application to preserve and serve legacy data for existing CDLE customers.
- Wrote complex SQL, stored procedures, functions, and views in **Oracle and MSSQL Server** to support migration work, and tuned performance using explain plans, Oracle hints, and new indexing strategies.
- Automated ETL loads into Oracle with a Python utility, eliminating repetitive manual data-loading steps.
- Set up **Azure DevOps CI/CD pipelines** that automated builds and deployments, replacing manual release steps; used Gradle for packaging and supported releases across UAT and production with Log4j/Logback logging.
- Integrated **GitHub Copilot** and AI-assisted code review into the team's Java, Angular, and React workflow, REST API development, legacy refactoring, and SQL optimization.
- Created an AI agent that monitors application logs and CloudWatch alerts, summarizes likely root causes, and recommends remediation steps to on-call developers.
- Developed an internal AI agent that connects to the team's code repositories and JIRA to generate first-pass code reviews, unit test scaffolds, and SQL tuning suggestions.
- Partnered with business teams to gather requirements and estimate effort for SOA integrations, participating in sprint planning, daily scrums, and retrospectives.

Environment: Java 17, Java 21, Spring Boot 2.7, Apache Camel, Kafka, AWS (Lambda, ECS, EKS, EC2, API Gateway, Route 53, S3, Secrets Manager), Docker, Angular, React, Node.js, TypeScript, Oracle, MSSQL Server, Python, Azure DevOps, Gradle, GitHub Copilot.

Dish Network – Denver, CO Feb 2021 – Sep 2021
Senior Java Developer

- Designed and built RESTful microservices with **Java 11, Spring Boot 2.6, Spring Cloud, and JPA**, communicating via REST and Kafka within a microservices architecture.
- Migrated applications from Java 8 to Java 11 to improve performance and long-term supportability, and migrated selected modules to **Kotlin**, building and maintaining Kotlin-based backend services.
- Developed serverless workflows with **AWS Lambda and Step Functions**, using Spring Cloud Function and DynamoDB Streams for real-time data processing, with storage in DynamoDB.
- Provisioned Lambda functions, Step Functions, and supporting infrastructure as code using **Terraform** and CloudFormation.
- Containerized Spring Boot microservices with Docker and deployed them to AWS ECS and EKS, improving portability and scalability; used Kubernetes and Docker Compose for orchestration.
- Built a Spring Boot microservice to produce and consume Kafka messages and partnered with DevOps to operationalize Kafka and resolve production issues.

- Delivered an **APIGEE** proxy proof of concept, onboarded application interfaces through NGINX configuration, and set up staging, test, and production of APIGEE Edge environments.
- Maintained interactive API documentation with Swagger and used MongoDB for non-relational data storage.
- Provided production support, including job monitoring, troubleshooting, and coordinating with business teams and DBAs; monitored CloudWatch alerts through Splunk.

Environment: Java 11, Spring Boot 2.6, Spring Cloud, JPA, Kafka, AWS (Lambda, Step Functions, DynamoDB, EC2, ECS, EKS, S3, CloudWatch, Secrets Manager), Terraform, CloudFormation, Docker, Kubernetes, APIGEE, NGINX, MongoDB, Swagger, Splunk, Maven, Gradle, GitLab.

OIT – State of Colorado (CDLE), Denver, CO Apr 2019 – Jan 2021
Software Developer

- Worked as a full stack developer building web applications with **Java 8, Spring Boot, and REST/SOAP** web services in support of the myUI+ and uFACTS data conversion programs.
- Built integration modules with **Apache Camel**, using Kafka and ActiveMQ as a messaging bus and developing Camel routes with JMS endpoints for message processing and routing.
- Developed Angular 6+ applications using RxJS, Bootstrap, DataTables, angular-datatables, ngx-spinner, and Jest, building cross-browser, responsive layouts with HTML5, CSS3, and JavaScript.
- Designed and built a Node.js front-end application to trigger data validations at multiple stages of the ETL process.
- Built RESTful APIs in Node.js and implemented authentication and authorization with **JSON Web Tokens (JWT)**.
- Designed entity mappings with Spring Data JPA against Oracle, and wrote complex queries, stored procedures, functions, views, and triggers in Oracle and MSSQL Server 2014.
- Developed automation and monitoring tools to help triage issues, with test coverage using JUnit, MUnit, and Mockito.
- Documented architect-provided designs in Visio and Google Diagrams, managed deployments across environments, and resolved defects reported by QA.

Environment: Java 8, Spring Boot, Spring Data JPA, Apache Camel, Kafka, ActiveMQ, JMS, Angular 6+, Node.js, JWT, RxJS, Oracle, MSSQL Server 2014, JUnit, Mockito, Log4j, IntelliJ IDEA.

Boeing – Seal Beach, CA May 2017 – Apr 2019
Java Developer

- Built backend services using **Spring MVC, Spring Boot, Spring AOP, Spring Security, and JPA**, with Hibernate as the ORM layer for all database operations.
- Developed Spring Boot microservices secured with **OAuth**, backed by Oracle.
- Implemented and consumed SOAP web services using **JAX-WS and Apache CXF**, generating client stubs from WSDL and testing with SoapUI. Built REST services with Spring and Apache CXF.
- Developed UI features in Angular 5+ and AngularJS following MVC patterns, integrating with REST services and using AJAX, jQuery, and JSON for client-side logic and validation.
- Containerized a Jersey-based Java RESTful API with Docker and deployed and troubleshot JAR/WAR files across clustered Tomcat environments.
- Practiced **Test-Driven Development** with Spring Test, JUnit, Mockito, and EasyMock, writing unit and integration tests for existing microservices.
- Implemented CI/CD with Jenkins and helped establish a Git-based release and code review workflow.
- Wrote SQL/PL-SQL including queries, joins, views, procedures, functions, triggers, and packages; used Spring Batch for batch processing.

Environment: Java 8, Spring MVC, Spring Boot, Spring Security, Spring Batch, Hibernate, JAX-WS, Apache CXF, Jersey, Angular 5+, AngularJS, jQuery, Oracle, Docker, Tomcat, Jenkins, JUnit, Mockito, EasyMock, Git, Log4j.

AT&T – Alpharetta, GA Dec 2016 – May 2017
Application Developer

- Built Spring Boot microservices for authentication and for connecting the viewer application to machine learning functionality.

- Developed REST web services with Spring and Apache CXF secured with OAuth, and SOAP services with JAX-WS and Spring-WS. Consumed services using RestTemplate.
- Built the DAO layer with Hibernate 3.0, Hibernate Template, and JDBC Template against Oracle 12c.
- Applied core Java expertise including multithreading, the Executor Service framework, collections, and Java 8 Streams and Lambda expressions.
- Built reusable TypeScript components and services with AngularJS to consume REST APIs.
- Analyzed existing programs for performance bottlenecks and designed fixes; built test suites using JUnit, Mockito, and SoapUI.
- Customized Jenkins for local build needs and build status tracking.

Environment: Java 8, Spring Boot, Spring Security, Spring-WS, Hibernate 3.0, Apache CXF, JAX-WS, OAuth, AngularJS, TypeScript, Oracle 12c, JUnit, Mockito, SoapUI, Jenkins, Log4j.

Basecamp Technologies – Pune, India Apr 2014 – Jul 2015
Junior Java Developer

- Developed web applications using the **Struts** MVC framework with JSP, JSTL, EL, custom tag libraries, and Struts validation.
- Integrated Spring dependency injection with Struts and Hibernate; implemented advanced Hibernate associations, multi-level caching, and lazy loading.
- Consumed SOAP (WSDL) services to retrieve credit card information from third parties, and RESTful services to render front-end data.
- Designed Oracle 9i tables and wrote stored procedures and triggers; performed unit testing with JUnit and coordinated with QA, DBAs, and business analysts.

Environment: Java, Struts 1.x, Spring, Hibernate, JSP, JSTL, SOAP, WSDL, Oracle 9i, JUnit.
